

Archer Evolv™ Compliance

Stay ahead of regulatory change.

The Challenge

Regulated enterprises face more than 200 regulatory changes daily across jurisdictions, agencies, and frameworks (Thomson Reuters, 2024). Most large compliance programs run on platforms not designed for this pace. Regulatory information sits in spreadsheets, niche tools, and document repositories, with no central, queryable view of every obligation the business is subject to.

Rules change direction faster than compliance teams can retool. Regulators now require documented proof of how AI is used in compliance decisions: an auditable record of what the AI concluded, how it reached that conclusion, and what trail it left behind. Generic large language models were not built to meet that bar. They produce error rates ranging from 26% to 94% on domain-specific compliance queries, and a log file bolted on after the fact is not an audit trail.

What Is Archer Evolv Compliance

Archer Evolv Compliance is the enterprise compliance management solution that connects regulatory intelligence to obligations, controls, evidence, and assurance activity with full lineage from source to outcome. It deploys standalone or as a seamless extension of any Archer installation, on-premises or SaaS.

AI Operators monitor more than 8,000 regulatory sources across 203 jurisdictions and 40 languages. They extract obligations with calibrated confidence and produce examiner-ready evidence with full lineage from regulation to control to evidence. Every agent operates identity-bound, scope-constrained, audit-emitting, expert-supervised, and provider-independent.

The Adaptive Loop

Archer Evolv Compliance runs a continuously operating loop across five stages that powers the entire compliance program.

- **Listen:** Monitors regulatory sources globally, filters relevant change by business profile, and scores each item for materiality before it reaches the compliance team.
- **Decide:** Compares extracted obligations against existing controls and proposes ranked resolutions.
- **Act:** Routes work to named owners with full context, covering policy authoring, control mapping, and scenario simulation for M&A, DORA, and EU AI Act readiness.
- **Assure:** Produces examiner-ready evidence with full lineage. Every AI decision emits a structured, immutable record of actor, intent, model, confidence, and justification.
- **Learn:** Recommendations refine continuously from program outcomes and more than 130 in-house regulatory specialists.

The Differentiation: Three Pillars

Archer's advantage is not one capability. It is the combination of capabilities built for compliance, the data foundation underneath it, and domain expertise sitting on top, a combination no generic platform can replicate.

AI built for GRC

Archer's proprietary models have been trained on regulatory and GRC data since 2017, purpose-built to interpret obligations, identify changes, and route them through the control fabric. The result is 95% extraction accuracy after expert review.

Contextual intelligence

Archer has operated as the system of record for risk, compliance, audit, and third-party risk for more than 25 years, accumulating over 22 million authoritative sources. That institutional depth gives the AI context that generic models lack, not just the text of a regulation, but the program history, control structure, and organizational context around it.

Engineered for regulatory change

The workflows, decision support, and evidence lineage inside Archer Evolv Compliance were designed for compliance and risk teams, not adapted from productivity tools or general-purpose platforms. The platform runs on a multi-provider model fabric, leaving organizations independent of any single AI vendor as the market evolves.

Measurable Results

Early adopters report payback under three years and material gains across cost, capacity, and cycle time:

Visit www.ArcherIRM.com | X @ArcherIRM | LinkedIn: Archer Integrated Risk Management

- 40 to 60% reduction in compliance operating costs.
- 20 to 40% reduction in regulatory change cycle times.
- 40 to 60% increase in research capacity.

A global financial services company deployed Archer Evolv Compliance across 15 countries and 2,100 users in seven months. Typical deployment runs six weeks with no custom development required.

“Archer Evolv Compliance has allowed us to introduce new products and services more quickly. We can now much more rapidly validate their compliance to regulations across every market we operate in.”

Chief Compliance Officer, Large Financial Services Provider

Recognition

- Leader, 2025 Gartner Magic Quadrant for GRC Tools and Assurance Leaders.
- Leaders Quadrant, 2025 Verdantix Green Quadrant GRC Software.
- Top Score, Compliance Management, Q2 2026 Forrester WAVE GRC.

About Archer

Archer's GRC keeps the world's most regulated enterprises ahead of constant regulatory change. More than 1,300 organizations run on Archer, including half the Fortune 500 and 37 of the top 50 global banks, with purpose-built AI grounded in the deepest regulatory data, so every result can be defended.
